

IP Surveillance and Monitoring Solutions

iFacility
GROUP OF COMPANIES

The iFacility Group provide high quality IP Surveillance and monitoring, allowing high definition CCTV images to be transmitted over your existing computer or network.

What is IP?

Internet Protocol is an open platform that will integrate with other equipment such as your existing computer network, gates, heating, lighting, door alarms or access control.

Benefits of IP

Remote Accessibility

Any video or CCTV images, live or recorded, can be viewed and controlled from any location in the world over wired or wireless networks. Remote accessibility and remote storage means IP network video is inherently more reliable and secure than analogue systems.

Intelligent Cameras

Smart, high definition network cameras provide motion detection, event handling, time and date, and other built-in capabilities making intelligent decisions on when to send alarms, when to record and at which frame rate, resulting in improved access to your information and more informed decision-making.

Scalability

IP Surveillance is highly scalable, with no limit on the amount of cameras that can be installed over a network.

Wireless Connectivity

Allows coverage of large scale sites, with a single recording point for multiple wireless cameras and areas making it a cost effective solution.

Lower System Costs

IP eliminates the need for dedicated CCTV cabling reducing installation costs. Beyond security, applications such as health & safety management, process control, integration with databases and employee training can reduce costs and enhance revenue.

Easier Integration

IP cameras can integrate with existing analogue CCTV and equipment, ensuring the migration to IP surveillance remains aligned with your timeframe and budget

IP Monitoring Solutions

iFacility can provide an IP based Remote Monitoring solution providing:

- Out of hours monitoring
- Live verbal warning to intruder
- Remote activation of gates and barriers
- Activity reporting
- Reduction of cost compared with manned guarding services

iFacility Group provides the total solution:

- Initial strategic advice
- installation
- Training
- Maintenance
- Network advice
- Upgrades
- Finance options
- Data Centres & Structured Cabling
- IP Phone Integration - unified communications
- Automatic Number Plate Recognition (ANPR)
- Asset Tracking

All our systems are installed to comply with all regulatory and data protection regulations to offer your premises and personnel peace of mind. We fully endorse the BS 8418 standard and are ISO 9001:2000 accredited. An ongoing commitment to Research and Development ensures latest technology is constantly being evaluated and implemented where possible

Talk to the iFacility Group about

- IP surveillance and high definition imaging
- Biometrics
- Integration of existing CCTV with IP technology – HVAC, Phone, Lighting
- Remote monitoring
- Networked access control systems
- Intruder alarm systems
- Perimeter protection and monitoring
- Automated gate and barrier systems and Number plate recognition systems
